Moncalieri, Jan. 5, 2023

Italdesign is celebrating its 55th anniversary at CES 2023 in Las Vegas with Climb-E, an autonomous transportation concept, and its fresh and dynamic corporate image. Climb-E embraces evolution in the concept of local sustainable urban mobility into continuous sustainable urban mobility. Along with its intended privately owned use, Climb-E can bring services to consumers through its ability to integrate into next-gen and future civil and residential structures.

- Following the success of its Pop.Up and Pop.Up Next projects in 2017 and 2018, Italdesign continues its mobility innovation and confirms its position as a pioneering technological hub capable of uniting different industrial sectors through advanced case studies. In Climb-E – with Italdesign for horizontal mobility, Schindler for vertical mobility, and Politecnico di Torino for architectural integration – the three have joined to create a visionary but realistic seamless mobility concept, featuring Easyrain’s technologies.

- Italdesign interprets new forms of future social and commercial activities with Climb-E and presents several examples of services offered straight to people’s doors and addressing environmental, social, and governance (ESG) issues.

- Italdesign showcases the Climb-E concept at CES 2023, along with the innovative company’s fresh and dynamic new corporate image.
